

# Module 8: Making APIs Discoverable

## Goal

A screenshot of the MuleSoft developer portal interface. The interface is divided into several sections. On the left, there is a sidebar with a menu containing 'All', 'MuleSoft', 'Training', 'My applications', and 'Public Portal'. The main content area is titled 'All assets' and features a search bar and a dropdown menu for 'All types'. Below this, there is a card for the 'ACME Banking API' by 'Max Mule', which is a REST API. To the right of this card, there is a larger section titled 'Welcome to your developer portal!' with a blue header and a message: 'Build your application network faster! Get started with powerful tools, intuitive interface, and best in class documentation experience.' Below this, there is another search bar and a list of assets, including the 'ACME Banking API' by 'Max Mule'.

2

At the end of this module, you should be able to

- Publish API specifications and fragments to Anypoint Exchange for discovery
- Create API portals for learning about and testing APIs in Anypoint Exchange
- Customize public portals with themes
- Create a sample use case with API Notebook inside API portals
- Gather feedback from API consumers

3

## Discovering APIs using Anypoint Exchange

## Introducing Anypoint Exchange

- Anypoint Exchange is at the core of the Center for enablement concept
- It is a place where all the assets are published for self-service and reuse by different parts of the organization
  - Each asset is a Maven artifact that can be versioned
- Exchange can house how-to and best practices documentation, API specifications (OAS and RAML), API fragments, templates, connectors, example, directory for API definitions, fragments, templates, connectors and examples

All contents © MuleSoft Inc.

5

## What does (and should) Exchange contain?

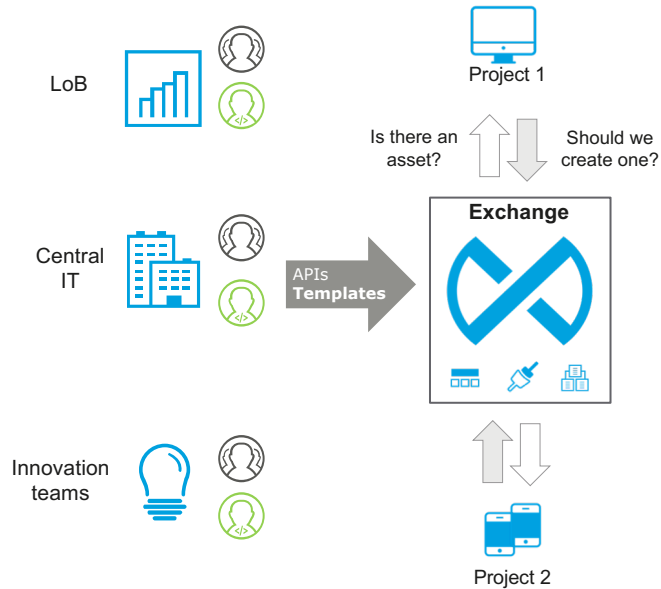

- MuleSoft-provided **public** assets available in all accounts to all users
  - You can work with MuleSoft to get connectors you build certified & added
- **Private** content only available to people in your org
  - Assets added by anyone in your org are added to your private Exchange
- Your organization should populate it to contain everything you need to build your integration projects
  - Including diagrams, videos, links, and more

All contents © MuleSoft Inc.

6

## Using Exchange: Success of C4E in action

All contents © MuleSoft Inc.

7

## Walkthrough 8-1: Publish a RAML API fragment to Anypoint Exchange

- Create an API Fragment project in Design Center
- Publish an API Fragment to Anypoint Exchange
- Consume the fragment from Anypoint Exchange

The screenshot shows the Anypoint Design Center interface. On the left, a file explorer shows a list of files under 'datatypes', including 'Account.raml', 'AccountOwner.raml', 'Address.raml', 'Bank.raml', 'Customer.raml', 'Money.raml', and 'Transaction.raml'. The main area displays a RAML snippet for a 'Banking Data Types' API. A 'Publish to Exchange' button is visible in the top right. Below the snippet, a 'Consume API Fragment' dialog is open, showing a search bar and a table of available fragments.

Name	Date Modified	Rating	Created By
<input checked="" type="checkbox"/> Banking datatypes	Jul 18, 2017	★★★★★ (0 votes)	MM Max Mule
<input type="checkbox"/> REST Connect Library	Jul 18, 2017	★★★★★ (0 votes)	CA Connectivity Account

# Discovering APIs using Exchange Portals

## Introducing portals for REST APIs in Exchange

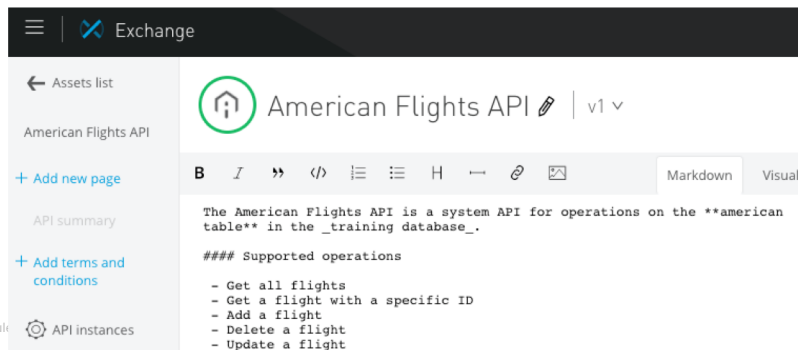

- **Portals** are automatically created for REST APIs published in Exchange
- An API portal has
  - An **API console** that provides a Postman-like experience for consuming and testing APIs
  - An **automatically generated API endpoint** that uses a **mocking service** to allow the API to be tested without having to implement it
- Exchange portals can be shared with both internal and external users

## Customizing portals in Anypoint Exchange

- After publishing an asset, you can add descriptions, tags, videos, links, and more
  - Text is written in GitHub flavored markdown  
<https://help.github.com/categories/writing-on-github/>
- You can also add additional pages and terms and conditions

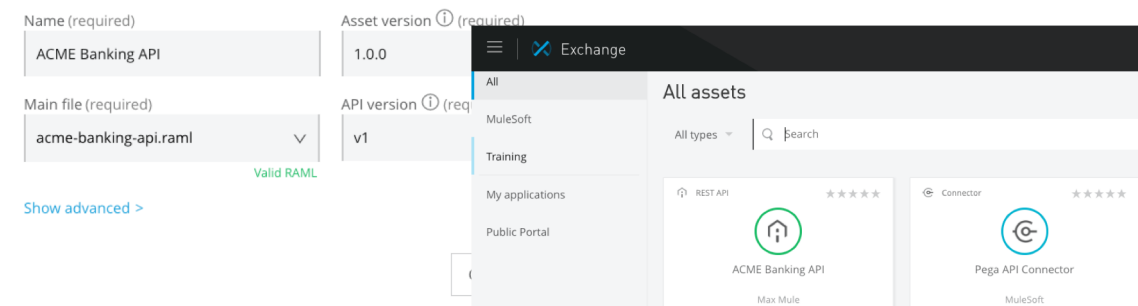

11

## Walkthrough 8-2: Publish a RAML API specification to Anypoint Exchange

- Publish a RAML API Specification to Anypoint Exchange
- Add documentation to an asset in API portal
- Publish and view the API portal

Publish API specification to Exchange

12

# Sharing Exchange portals

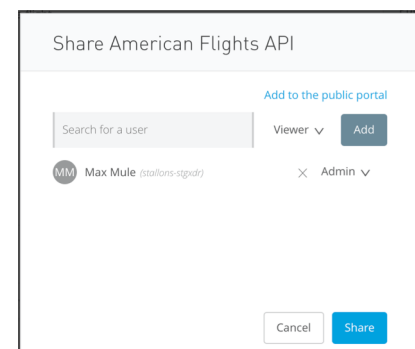

## Sharing API portals

- You can share an API in Exchange with other internal or external users

- Share an API within an org through the private Exchange
- Share an API with external users in a public portal that you create from Exchange

All contents © MuleSoft Inc.

## Walkthrough 8-3: Add an API specification to the public portal

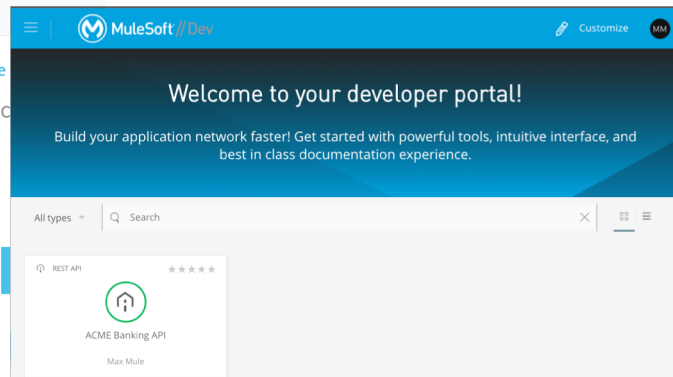

- Add an API asset in the public portal
- Define a color scheme for the public portal
- Publish and view the resulting portal

Share ACME Banking API

Select API versions to share in the public portal  
You can manage instance visibility in [API instances](#)

15

## Creating API Notebooks

## Creating an API Notebook

- API Notebook is a web based tool to build interactive tutorials and use cases in JavaScript
- API Notebook can generate an API client based on a RAML API definition
  - The API client can call an API endpoint on a real server or a mocking server
- Helps creates a scenario/story by stringing together multiple API calls

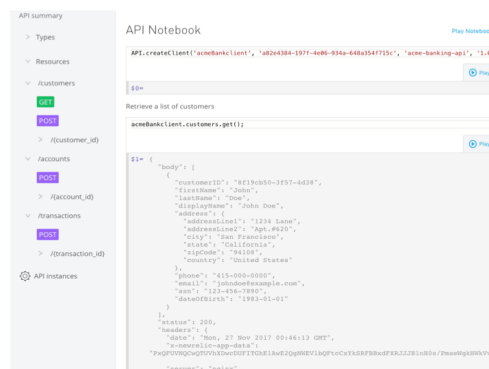

All contents © MuleSoft Inc.

17

## Walkthrough 8-4: Create a sample use case with API Notebook inside the API portal

- Add an API Notebook in the API portal
- Perform string manipulation on datatypes
- Create and use JavaScript functions inside API Notebook
- Publish the API Notebook page in the API portal

All contents © MuleSoft Inc.

18

# Summary

## Summary

- Exchange portals allow you to quickly rapidly share your API designs
- Portals contains several pages to help API consumers to learn about the API
- API Notebook is a component in the API portal that makes JavaScript calls to API endpoints
- Publish your API definitions on the Exchange to allow other people to discover your APIs and provide feedback (can be made public to users outside your business organization)
